- Lucy has just woken up. I think she _____ our message, because her phone was on silent all night.

B Choose the correct answers to complete the sentences.

- It's *highly* / *absolutely* unlikely that the results will be ready before Friday.
- The performance we saw last night was *absolutely* / *highly* perfect from beginning to end.
- Every figure in the spreadsheet has been checked and is *completely* / *absolutely* accurate.
- She is a *totally* / *highly* successful engineer who now runs her own company.
- We were *totally* / *highly* amazed by how quickly he learned to write code.

C Complete the sentences with the correct form of the word in parentheses.

Example: Some vegetables can be **genetically** (*gene*) changed so they are not affected by disease.

- Her _____ (curious) about how the brain works led her to study neuroscience.
- Every _____ (benefit) of the scholarship must hand in a short report at the end of the year.
- The _____ (discover) of penicillin changed modern medicine forever.
- He has no _____ (medicine) training, but he volunteers at the clinic as a driver.
- What do you think has been the most important _____ (science) advance of the last ten years?

D Complete the sentences with the correct conditional (zero, first, second, or third) form of the verbs in parentheses.

Example: The results would have been clearer if the team **had repeated** (repeat) the experiment.

1. If water _____ (reach) 100 °C, it boils.
2. We _____ (discover) more about the deep ocean if we send a robot submarine down there next year.
3. If I _____ (be) a scientist, I would study renewable energy.
4. He wouldn't have failed the exam if he _____ (revise) the formulas properly.
5. If the lab hadn't received extra funding, the project _____ (not continue) last year.

E Circle the correct word in parentheses to complete the text.

A (1) ____ (magnet / wire) has two ends called poles, and it pulls certain metals towards it. The metal it attracts most strongly is (2) ____ (iron / hammer), which is also the main ingredient of (3) ____ (steel / compass).

Inside every material there are millions of tiny particles. An (4) ____ (atom / electric current) is the smallest one of these. In a magnetic material, they all point in the same direction. If you drop a magnet or hit it with a (5) ____ (hammer / compass), they are shaken out of line and the magnet loses its power.

F In each pair of sentences, there is one correct and one incorrect sentence. Check (✓) the correct sentences.

Example: a. The receptionist asked me to sign the form. ✓ b. The receptionist asked to sign the form. ____

1. a. The coach encouraged the team training harder. ____
b. The coach encouraged the team to train harder. ____
2. a. He wished he had invited Ana to the presentation. ____
b. He wished he had invited to the presentation Ana. ____
3. a. The doctor warned my father to be careful with salt. ____
b. The doctor warned my father be careful with salt. ____
4. a. Visitors are not permitted touching the exhibits. ____
b. Visitors are not permitted to touch the exhibits. ____
5. a. I didn't expect her to remember my birthday. ____
b. I didn't expect her remember my birthday. ____

G Complete the sentences with the correct words from the box.

Example: Marco has very little money saved, so he'll have to travel on a **shoestring**.

ROUGH JET EXPLORE LIGHT HIT **SHOESTRING**

1. We're going to _____ the road early tomorrow to avoid the traffic.
2. I never take more than one small bag, because I prefer to travel _____.

Thank you for your message. Here is the information you asked for about your stay.

Our guesthouse is a(n) (Example) **family-friendly** place, so children of all ages are welcome. If you are travelling with small children, we also offer a (1) _____ service in the evenings.

Although the north of the island is fairly (2) _____, the south is quiet and green, with long empty beaches. From here you can easily reach the (3) _____ cathedral in the old town, which appears in every guidebook.

The bicycles we rent out are (4) _____ by visitors, since the coastal path is flat and easy to follow. Our staff are patient and (5) _____, and they are always happy to help guests plan their day.

We look forward to welcoming you!
Helena Braga

K Read the text and choose True or False.

Women who changed science

Not so long ago, most people would have described a scientist as a man in a white coat. The names we learn at school – Newton, Darwin, Einstein – do little to correct that picture. Yet plenty of women have made discoveries that changed the way we live, even if their names are far less familiar.

Take Chien-Shiung Wu, a physicist born in China who moved to the United States in 1936. In 1956 she designed an experiment which proved that a law of physics scientists had accepted for decades was simply wrong. The two male colleagues who had suggested the idea received the Nobel Prize for the work; Wu did not, although she later became the first woman to lead the American Physical Society.

Another example is Tu Youyou, a Chinese chemist who spent years reading ancient medical texts in search of a treatment for malaria. In the 1970s she identified a compound in a common plant that kills the parasite. The drug she developed has since saved millions of lives, mostly in Africa and Asia, and in 2015 she was finally awarded the Nobel Prize in Medicine.

Neither woman worked in comfortable conditions, and neither received much attention at the time. Both, however, changed their field for good.

- | | |
|--|--------------|
| 1. The writer thinks school lessons give a balanced picture of who scientists are. | True / False |
| 2. Wu's experiment showed that something scientists believed was not true. | True / False |
| 3. Wu was given the Nobel Prize for the experiment she designed. | True / False |
| 4. Tu Youyou found her treatment by studying old written sources. | True / False |
| 5. Both scientists were widely recognized while they were doing the work. | True / False |

L Read the text and choose True or False.

Too many visitors?

Every summer the same news stories appear: a small town somewhere in Europe is disappearing under a wave of visitors. Residents complain that they can no longer buy bread in their own neighbourhood, because the bakery has become a souvenir shop. Some cities have started to react. A few now charge day visitors an entrance fee; others limit the number of cruise ships allowed to dock.

At first sight, these measures seem unfair. Travel makes people more open-minded, and nobody enjoys being told that a place is closed to them. It also seems strange to punish tourists for going exactly where the airlines and the hotels have invited them to go.

Look more closely, though, and the argument changes. When a neighbourhood fills up with short-term rentals, rents rise until local families simply cannot afford to stay, and the community that visitors came to see slowly disappears. A fee of a few euros will not stop anyone who has already paid for a flight, but it does put money back into the streets that carry the cost.

Is this the whole answer? Probably not. Tourism still pays the wages of a great many people, and in some countries it is the main source of income. But doing nothing is no longer an option either, and a busy city has every right to protect the people who live in it.

- | | |
|--|--------------|
| 1. In some places, shops that served local people have been replaced by businesses for tourists. | True / False |
| 2. The writer believes that travelling has no positive effect on people. | True / False |
| 3. The writer expects entrance fees to stop most tourists from visiting. | True / False |
| 4. According to the text, rising rents can force local residents out of their neighbourhood. | True / False |
| 5. The writer concludes that cities should be allowed to control tourist numbers. | True / False |
