4. Eagles can see a rabbit from two kilometers away; their _____ is amazing.
5. The scientist recorded the _____ of the wolves for six months.

K Read the text and choose the correct answers (a, b, or c).

The Dogs Who Chose Us

Dogs were the first animals to live with people. Scientists do not agree about the date, but most of them believe that wolves began to follow human groups more than 15,000 years ago, long before anybody kept sheep or grew wheat. The friendliest wolves probably came closest to the fires, ate the food that people threw away, and slept near the camp. Over hundreds of generations, those animals became the dogs we know today.

In many old cultures, dogs had a special position. In Mexico, small hairless dogs were buried with their owners because people believed the animal would guide them after death. In parts of northern Europe, a family that could not feed its dog was expected to give it to a neighbor rather than let it go hungry.

Today, researchers in Budapest study how dogs understand us. In one experiment, dogs watched a person hide a toy under one of two boxes. Almost every dog went to the correct box immediately, while wolves raised by humans failed the same test. The team believes that dogs read our faces and our hands in a way no other animal does.

But the researchers are careful. A dog that follows your finger is not necessarily a dog that loves you; it may simply have learned that people are a good source of food. After 15,000 years together, we still cannot say exactly what our dogs think of us.

1. Most scientists believe that wolves started following human groups ...
 - a. more than 15,000 years ago.
 - b. after people began to keep sheep.
 - c. about 4,000 years ago.
2. The wolves that became dogs were probably the ones that ...
 - a. were the largest and the strongest.
 - b. were the least afraid of people.
 - c. were the best hunters at night.
3. In Mexico, hairless dogs were buried with their owners because people believed the dogs ...
 - a. would protect the family home.
 - b. were a kind of god.
 - c. would show them the way after death.
4. In the Budapest experiment, ...
 - a. every dog and every wolf found the toy.
 - b. no animal found the toy.
 - c. the wolves did worse than the dogs.
5. The researchers say that a dog that follows a person's finger ...
 - a. may only be looking for food.
 - b. is certainly attached to that person.
 - c. has been trained for months.
